2023 Streamline Wireless Deployment Bills = The Digital Prison

Significant harms to public safety, privacy, property values and personal freedoms.

HR. 3557: American Broadband Deployment-“Digital Prison” Act attempts to rewrite the 1996 Telecom Act by resetting goalposts and altering the definitions of “Antenna“, “Communications Service” , “Personal Wireless Service“, and “Effective Prohibition.” It eviscerates local zoning laws regarding the placement, construction, modification and operation of Wireless Facilities.

“Deemed-Granted” ratchets for applications and the replacement of the FCC’s “presumptive” shot clocks with others written into federal law would **force cities to approve applications without review and to allow antennas on any structure** that could support an antenna in expansion of “6409 preemption”. The bill also authorizes the FCC to invalidate localities’ legislation and regulation. This enables a *24/7 wireless surveillance grid* that will lock down Americans to produce a CCP style social credit system. **HR. 3557 is opposed by the National League of Cities, National Association of Counties, US Conference of Mayors, NATOA and every locality in the U.S..**

The Wireless World Irrevocably changed on Friday the 13th in August, 2021 when the DC Cir. judges in *CHD, EHT et al v. FCC (2021)* accepted 27 volumes (11,000+ pages) of scientific evidence regarding adverse RF/MW radiation bioeffects - and based their ruling and FCC mandate on that evidence. Modulated RF/MW radiation causes neuro, cardiac, reproductive, and immune harms, including cancer. Exacerbated by internally absorbed metals, it causes suffering and early death in humans, animals, insects and plants. The US Military uses RF/MW radiation as weaponry. The ruling was not appealed to the Supreme Court, so all 50 states and the US Govt. are bound by this ruling.

Wireless Bills Eliminate Environment & Historic Preservation: Both HR-3557 & HR-4141, contrary to legislative intent, preempt NEPA & NHPA reviews of applied-for antennas. Horrifically, S.2018 would have the Commerce Dept deploy microwave transmitters in our *national parks* - where Americans seek respite from their digitalized lives.

Fiber Optics to the Premises, Not Wireless solves the “Digital Divide”: Fiber Optic cable provides the fastest, safest, most reliable & secure, and energy-efficient connection. Wireless, by contrast is slow, harmful, unreliable, hackable, energy-consumptive and -wasteful. Keeping localities from creating fiber broadband discriminates against low-income sectors stuck with inferior wireless. By contrast, Chattanooga operates its own fiber network. Towns in Utah collectively built a fiber network, as have other localities.

National Security Threat: HR 1123, passed in the House and incorporated in HR 4510 - NTIA Reauthorization - would require a study of mobile networks’ security, but stunningly excludes 5G, which is vulnerable to criminal and terrorist hacking. This decision must be reversed.
